Wow! Super-fast Processing

Color Separation Software for screen-printing on black, white and all color garments.

Ryonet has Separation Studio™ and everything you need for simulated process style printing!

There is no argument in the industry, **Spot Process Separation Studio™** is the finest and most accurate color separation software for simulated process style color separating and screen-printing.

Separation Studio has the easiest user-interface plus the color control features you need for high-quality and high-production. On-press printing is easy due pre-press and press standards proven over a 20 plus year history by shops of all sizes around the world. Without question the best solution - prove it to yourself with a FREE, fully-functional software trial. Download and discover what the industry already knows - Spot Process Separation Studio is the right choice for every shop!

This 2010 release uses the same powerful and accurate color separation engine developed by the industry veterans and software engineers at Freehand Graphics, Inc. PLUS it is loaded with great new features such as all the advanced editing tools for direct editing of the separated file.

Whether you are just starting out or are an established shop, Ryonet has the equipment, software and products you need to make tonal-image separating and printing easy and profitable.

\$895.00 Spot Process Separation Studio Software (new user)

\$295.00* Upgrade price for current SPVR (Spot Process VueRite) dongle owners

FREE TECH SUPPORT • TRAINING VIDEOS • SEMINARS • WEBINARS and more!

When you want to give your clients more than traditional vector based (Illustrator, DRAW) spot color separating - the choice is easy: Spot Process Separation Studio.

For current pricing and availability please visit our web site as these printed prices are subject to change.

Spot Process Separation Studio delivers the proper printing channels (spot colors) for your file. If you are familiar with cmky printing then you know that a few colors can deliver on press a super realistic reproduction of an image. The rgb light spectrum is a much broader spectrum and subsequently Separation Studio delivers an even better color reproduction of your tonal-image file (Photoshop, PhotoPaint), scanned image, stock image or overly modeled illustration file (too many colors for your press) using standard spot colors. Plus, the print quality is far superior than cmky because you are using standard printing inks and not translucent style cmky inks.

Every Separation Studio File Includes:
Underbase • Standard Set of Spot Color Printing Channels • 3 Black Channel Options • Highlight (TOP) White Channel • Auto Color Merge and much more...
