How Does bling !t Work?

1

Tips

- After assigning a rhinestone pattern you may NOT resize the design. Size your design before applying pattern

- Reduce the number of stones in your design by controlling the space between each stone.

- Not all art work is suitable for rhinestone patterns. Simplify your graphics!

Load the red stencil material into your cutting device.

Configure your cutter:

- Roland Gx-24: 220 G Force, Set Blade Depth and Slow Speed.
- Graphtec: Force 24, Cut Speed 30, Quality 1, Emulation To 1.

2

Do a test cut to ensure proper blade and force configuration

3

Peel backing from the stencil material leaving the 'circles' on the backing. Use one quick motion. Mount stencil on backer board.

4

Place stencil in suitable tray and gently brush loose rhinestone into your template.

5

Once stones are positioned with the facet facing upwards cover the design with a piece of transfer tape

6

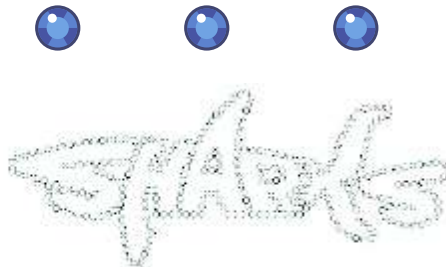

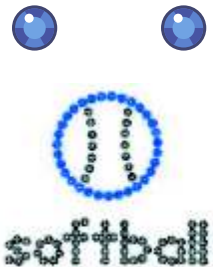

Set heat press to 350 degrees F. Heat apply for 10 seconds, cool to touch

7

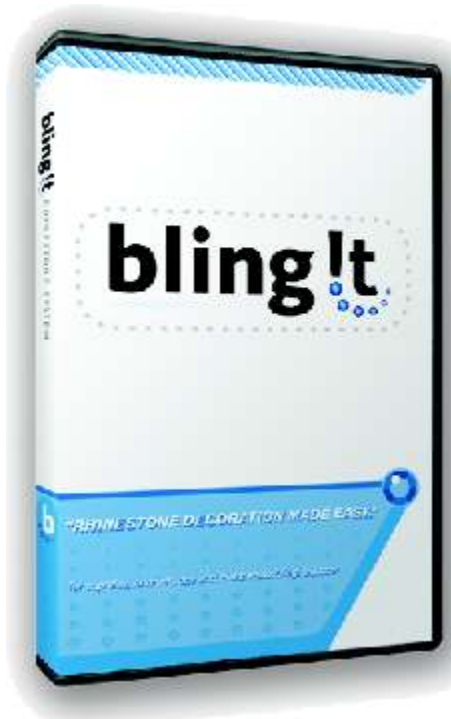

Once cool to the touch, remove transfer tape. Care instructions: Avoid drying, or dry on low for maximum life. Wash inside out.

RHINESTONE DESIGN KIT

bling !t Rhinestone Software creates the magic!

bling !t software is an easy to use, vector based program allowing the user to create custom rhinestone stencils.

Simply import a vector image and with a click of a button bling !t software will outline (or fill) the image, with the specified number and size of stones along the path.

In only minutes a HIGH QUALITY, custom rhinestone transfer is created that your customers will love!
